Resto Window Switch

Congratulations! You have just purchased one of the finest Power Window switches on the market!

The Resto switch is a unique way to operate your power windows without sacrificing the restored look of the interior.

The thin design of this switch allows you to install it in the same fashion as the manual window regulators. It is also equipped with one of three popular window crankshafts (Square universal that fits most early and after market handles, Classic Chevy, and Classic Ford). The round design of this switch allows more versatility in your installation. The 3/8" Square universal shaft is made to fit most early and after market handles. It may be necessary to round off the sharp corners for a proper fit on some handles.

This switch can be mounted in any position 360* the main factor will be the placement of the crank handle in the rest position. It is suggested a paper template be made before any holes are drilled. Make sure you have clearance behind the switch so that moving parts of the window won't cause damage to the switch, wires or window parts.

When the crank handle is pressed down, the window should go down, the same applies when pushing the crank handle up, the window should go up. If this is not the case swap the two wires on the window motor.

A drawing has been supplied so you can make your own wire harness for the switches.

Available from Golden RODtronic

Standard wiring harness

Deluxe wiring harness (this harness allows you to operate the passengers window from the drivers switch)

Whenever electrical devices are being installed the first step is to disconnect the ground cable on your battery

Because Golden RODtronic cannot be assured that the Resto switch was installed as instructed, Golden RODtronic liability is limited to the replacement of the Resto switch. The purchaser signifies his/her agreement with the warranty, and the limited liabilities of Golden RODtronic stated herein, by the attempted or complete installation of this product.
